编写gtk软件流程

1.构件声明:

```
GtkWidget *window;
GtkWidget *fixed;
GtkWidget *button;
```

2.使用gtk函数前初始化:

```
gtk_init(&argc, &argv);
```

3.构件定义:

```
window = gtk_window_new(GTK_WINDOW_TOPLEVEL);
fixed = gtk_fixed_new();
button = gtk_button_new();
```

4.设置构件属性:

```
gtk_window_set_title("GtkWindow");
gtk_button_set_label(button,"clicked");
```

5添加布局构件:

gtk_container_add(GTK_CONTAINER(window),fixed);

6.将构件放进布局中:

gtk_fixed_put(GTK_FIXED(fixed),button,50,50);

7.添加信号量:

```
g\_signal\_connect(G\_OBJECT(window), "destroy", G\_CALLBACK(gtk\_main\_quit), G\_OBJECT(window)); \\ g\_signal\_connect(G\_OBJECT(button), "clicked", G\_CALLBACK(on\_button\_click), G\_CALLBACK(on\_button\_click), G\_CALLBACK(on\_button\_clicked), \\ g\_signal\_connect(G\_OBJECT(button), G\_CALLBACK(on\_button\_clicked), G\_CALLBACK(on\_button\_clicked), \\ g\_signal\_connect(G\_OBJECT(button), G\_CALLBACK(on\_button\_clicked), G\_CALLBACK(on\_button\_clicked), \\ g\_signal\_connect(G\_OBJECT(button), G\_CALLBACK(on\_button\_clicked), G\_CALLBACK(on\_button\_clicked), \\ g\_signal\_connect(G\_OBJECT(button), G\_CALLBACK(on\_but
```

8.编写回调函数:

```
在main函数之上。
void on_button_click(Widget *widget, gpointer user_data)
{
//逻辑
}
```

9.显示构件:

gtk_widget_show_all(window);

10.执行gtk:

gtk_main();

11.编译gtk:

```
gcc gtk.c -o gtk `pkg-config --libs --cflags gtk+-2.0`
```
